

## JETSTREAM HD

Jetstream and MTN Satellite Communications (MTN) have combined their strengths to offer yachts the most advanced HD streaming service solution at sea. While sailing around the globe or in port, owners and guests can now watch their preferred channels in HD quality whether on TV, laptops or tablets.

The Jetstream HD is the yachting industry's unique video streaming service that provides MTN's yacht customers the ability to view television content in high definition on their televisions as well as their mobile devices, delivering the "on land" experience while at sea.

This complete in-house media solution is tailored to the client's need and can include most TV channels, while MTN guaranteed bandwidth ensures the high-quality video delivery.

### How does it work?

Jetstream HD allows yacht owners and guests to access television channels of their choice in high definition anywhere in the world. Customers can view Jetstream HD services on their mobile devices or their onboard TVs, via access from the Internet or through a Jetset box connected directly to the TV via an HDMI or to the onboard video distribution system.

Channel selection is at the client's fingertips with the full functionality of their satellite receiver. The Jetstream HD provides access to satellite receivers from international providers including Kartina and NTV (Russian), Orbit – Showtime and ADMC + AJC (Arabic), Direct TV and Dish network (USA).

MTN delivers the requested bandwidth through the yacht's VSAT antenna. A minimum of 2.5 mbps down link is required to realize full HD quality.

### Features and Benefits:

- HD-quality content
- Customer chooses TV channels
- Content can be streamed on TV, laptops and mobile devices
- Bandwidth prioritized to ensure high quality
- Broadcast quality video encoding
- 3-, 6- and 12-month subscription plans
- 24/7/365 access: private and secure access is provided from any location in the world
- Personalized customer support

### Equipment & Network requirements:

- Minimum bandwidth requirement: 2.5 mbps for full capacity of Jetstream HD
- No hardware required; Jetstream can host most of the equipment
- Jetset box is optional
